COURSE OBJECTIVES:

Upon completion of the course, the student will be able to:

1. Utilize the knowledge of nursing theory and the scientific principles of pathophysiology, pharmacokinetics and pharmacotherapeutics in the assessment and management of health and acute or chronic illness in pediatric populations/families.
2. Implement health screenings, health promotion activities, anticipatory guidance, and a plan of care for pediatric populations/families based on clinical practice guidelines, current research, and individualized patient/family needs.
3. Incorporate information from the health history, physical examination, diagnostic tests, developmental status, and individualized health needs to formulate a database, identify differential diagnoses, and establish priorities of care for pediatric populations/families.
4. Develop a collaborative, dynamic plan of care for children/families utilizing on-going data collection and continual re-evaluation of the database, differential diagnoses, and priorities of care.
5. Implement a collaborative and comprehensive plan of care to maximize physical and mental health for pediatric populations/families.
6. Develop therapeutic interventions related to social, cultural, spiritual, bioethical, and economic factors affecting the health care of pediatric populations/families and underserved populations experiencing health, acute, and chronic illness.
7. Implement the role of the nurse practitioner to influence health policy, improve quality health care, and promote access to care for pediatric populations/families and underserved populations.
8. Collaborate with other health professionals to deliver evidence-based, safe, and cost-efficient health care to children and their families.
9. Maintain standards of professional behavior and accountability in the implementation of the Nurse Practitioner role.
